

# **pyCGNS.DAT/Manual**

***Release 4.0.1***

**Marc Poinot**

January 10, 2011

# CONTENTS

The pyCGNS module is a set of tools for database management of your CGNS files.

**Warning:** The actual database system used by CGNS.DAT depends on your installation. The default is *sqlite3* which is embedded into Python v2.6 and which is enough for a first try. The *mysql* driver is also available but you have to set it as default, see the CGNS.DAT configuration page.
