

pyCGNS.DAT/Manual

Release 4.0.1

Marc Poinot

January 26, 2011

CONTENTS

The pyCGNS module is a set of tools for database management of your CGNS files.

Warning: The actual database system used by CGNS.DAT depends on your installation. The default is *sqlite3* which is embedded into Python v2.6 and which is enough for a first try. The *mysql* driver is also available but you have to set it as default, see the CGNS.DAT configuration page.
