pyCGNS.DAT/Manual

Release 4.0.1

Marc Poinot

November 19, 2010

CONTENTS

The pyCGNS module is a set of tools for database management of your CGNS files.

> **Warning:** The actual database system used by CGNS.DAT depends on your installation. The default is *sqlite3* which is embedded into Python v2.6 and which is enough for a first try. The *mySQL* driver is also avail able but you have to set it as default, see the CGNS.DAT configuration page.

- *genindex*
