pyCGNS.PAT/Manual

Release 4.0.1

Marc Poinot

May 13, 2011

CONTENTS

The module to create and manipulate SIDS/Python trees. PAT has a *cgnslib* module with functions to create SIDS/Python compliant data structures. PAT defines all the CGNS types, names, enumerates or any other CGNS keyword.

SIDS PATTERNS

This module contains all the CGNS/SIDS structures using CGNS.PAT as API.

THE PYTHONISH CGNS LIB

The so-called *CGNS lib* or *MLL* or *Mid-level* library, is set of functions for used to read/write/modify a set of nodes matching a CGNS/SIDS type. The Pythonish flavour of this library declares a set of functions with more or less the same interface but with Python values.

UTILITIES

The *CGNS.PAT.cgnsutils* has a large set of utility functions.

CGNS.PAT.cgnsutils.**checkDuplicatedName**()
> Checks if the name is not already in the children list.

CGNS.PAT.cgnsutils.**checkName**()
> Checks if the name is CGNS/Python compliant node name.

CGNS.PAT.cgnsutils.**checkNode**()
> Checks if a node is a compliant CGNS/Python node. If *dienow* is set to True, an exception is raised if the check is bad.

CGNS.PAT.cgnsutils.**childNames**()
> Returns the list of children names of a CGNS/Python node

CGNS.PAT.cgnsutils.**getAllNodesByTypeList**()
> Returns a list of paths from the argument tree with nodes matching the list of types. The list you give is the list you would have if you pick the node type during the parse:

> ['CGNSTree_t','CGNSBase_t','Zone_t']

> Would return all the zones of your tree. See also getAllNodesByTypeSet()

> **Args:**

>> • typelist: the (ordered) list of types

>> • tree: the start node of the CGNS tree to parse

> **Return:**

>> • a list of strings, each string is the path to a matching node

CGNS.PAT.cgnsutils.**getAllNodesByTypeSet**()
> Returns a list of paths from the argument tree with nodes matching one of the types in the list.

>> ['BC_t','Zone_t']

> Would return all the zones and BCs of your tree. See also getAllNodesByTypeList()

> **Args:**

>> • typelist: the list of types

>> • tree: the start node of the CGNS tree to parse

> **Return:**

>> • a list of strings, each string is the path to a matching node

CGNS.PAT.cgnsutils.**getAllPaths**()
> Returns all the paths of a CGNS/Python tree as a list of strings.

CGNS.PAT.cgnsutils.**getChildrenByPath**()
> Returns the children list of a CGNS/Python node with the argument path.

Args:

- tree: the target tree to parse

- path: a string representing an absolute or relative path

Remark:

- Returns None if the path is not found

CGNS.PAT.cgnsutils.**getNodeAllowedChildrenTypes**()
    Returns a list of string with all allowed CGNS types for the node.

CGNS.PAT.cgnsutils.**getNodeAllowedDataTypes**()
    Returns a list of string with all allowed CGNS data types for the node.

CGNS.PAT.cgnsutils.**getNodeByPath**()
    Returns a CGNS/Python node with the argument path.

Args:

- tree: the target tree to parse

- path: a string representing an absolute or relative path

Remarks:

- the node is returned with all sub-tree

- Returns None if the path is not found

CGNS.PAT.cgnsutils.**getNodeShape**()
    Returns the value data shape for a CGNS/Python node. If the shape cannot be determined a - is returned.
    The returned value is a string.

CGNS.PAT.cgnsutils.**getNodeType**()
    Returns the value data type for a CGNS/Python node. Data type is one of *C1,I4,I8,R4,R8*, a *??* is returned
    if datatype is not of these. The returned value is a string.

CGNS.PAT.cgnsutils.**getTypeByPath**()
    Returns the CGNS type of a CGNS/Python node with the argument path.

Args:

- tree: the target tree to parse

- path: a string representing an absolute or relative path

Remark:

- Returns None if the path is not found

CGNS.PAT.cgnsutils.**getValueByPath**()
    Returns the value of a CGNS/Python node with the argument path.

Args:

- tree: the target tree to parse

- path: a string representing an absolute or relative path

Remark:

- Returns None if the path is not found

CGNS.PAT.cgnsutils.**hasFortranFlag**()
    Returns False if the node value is a numpy array with Fortran flag OFF. Any other case leads to a True
    return.

CGNS.PAT.cgnsutils.**isRootNode**()
    Checks if a node is the CGNS/Python tree root node. If *dienow* is set to True, an exception is raised if the
    check is bad.

CGNS.PAT.cgnsutils.**newNode**()
> Creates a new node with and bind it to its parent.

> **Args:**

>> • name: node name

>> • value: node value

>> • children: list of node children

>> • type: CGNS type

>> • parent: parent node where to insert the new node

> **Return:**

>> • The new node

> **Remark:**

>> • If parent is None (default) node is orphan

CGNS.PAT.cgnsutils.**removeFirstPathItem**()
> Returns the path without its first element. If there is only one element in the path, or if the path is / then / is returned.

CGNS.PAT.cgnsutils.**sameNode**()
> Compare two nodes.

> **Args:**

>> • nodeA: first node to compare to second one

>> • nodeB: second node to compare to first one

> **Return:**

>> • False if there is any kind of diffence with node contents

> **Remarks:**

>> • Comparison looks at contents values (name string, type string,...)

>> • There is no recursion in the children list

CGNS KEYWORDS

Instead of generating a new doc from a file, the file itself is included here. The purpose of *cgnskeywords.py* is to declare all constants as Python variables. This leads to several advantages:

- You cannot make a typo on a name. For example, if you use "ZoneGridConnectivity" as a plain string you may mistype it as "Zonegridconnectivity" or "ZoneGridConectivity" and this may silently produce a bad CGNS tree.

- You can handle enumerate as lists. For example you have lists for units: MassUnits_l, LengthUnits_l, AllDimensionalUnits_l, AllUnits_l

- You can identify what is a CGNS reserved or recommended name or not.

```
# -----------------------------------------------------------------------------
# pyCGNS.PAT - Python package for CFD General Notation System - PATternMaker
# See license.txt file in the root directory of this Python module source
# -----------------------------------------------------------------------------
# $Release: v4.0.1 $
# -----------------------------------------------------------------------------

# -----------------------------------------------------------------------------
# TYPES, ENUMERATES, CONSTANTS, NAMES from CGNS/SIDS v2.5.3
#
# [1] A CGNS/SIDS string constant is postfixed with _s
# 'ZoneType' is ZoneType_s
#
# [2] A CGNS/SIDS string constant repersenting a type has _ts
# 'ZoneType_t' is ZoneType_ts
#
# [3] A list of possible values for a given type has _l
# ZoneType_l is [Structured_s,Unstructured_s,Null_s,UserDefined_s]
# which is same as ["Structured","Unstructured","Null","UserDefined"]
#
# [4] An enumerate mapping of a list of values is not prefixed
# ZoneType is {'Unstructured':3,'Null':0,'Structured':2,'UserDefined':1}
#
# [5] The reverse dictionnary of the previous one is postfixed with _
# ZoneType_ is {0:'Null',1:'UserDefined',2:'Structured',3:'Unstructured'}
#

    - *GeometryReference_t* ({UserDefined})
    - *RotatingCoordinates_t* (RotatingCoordinates)
    - *UserDefinedData_t* ({UserDefined})

5.35 FlowEquationSet_t

- Name
    - FlowEquationSet
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *GoverningEquations_t* (GoverningEquations)
    - *EquationDimension_t* (EquationDimension)
    - *GasModel_t* (GasModel)
    - *ViscosityModel_t* (ViscosityModel)
    - *ThermalRelaxationModel_t* (ThermalRelaxationModel)
    - *ThermalConductivityModel_t* (ThermalConductivityModel)
    - *TurbulenceModel_t* (TurbulenceModel)
    - *TurbulenceClosure_t* (TurbulenceClosure)
    - *ChemicalKineticsModel_t* (ChemicalKineticsModel)
    - *EMMagneticFieldModel_t* (EMMagneticFieldModel)
    - *EMElectricFieldModel_t* (EMElectricFieldModel)
    - *EMConductivityModel_t* (EMConductivityModel)
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *UserDefinedData_t* ({UserDefined})

5.36 FlowSolution_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *GridLocation_t* (GridLocation)
    - *DataArray_t* ({UserDefined})
    - *Rind_t* (Rind)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)

– *Descriptor_t* ({UserDefined})

– *UserDefinedData_t* ({UserDefined})

5.37 GasModel_t

- Name
    - GasModel
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.38 GeometryEntity_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N

5.39 GeometryFile_t

- Name
    - GeometryFile
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.40 GeometryFormat_t

- Name
    - GeometryFormat
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.41 GeometryReference_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *GeometryFile_t* (GeometryFile)
    - *GeometryFormat_t* (GeometryFormat)
    - *GeometryEntity_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.42 GoverningEquations_t

- Name
    - GoverningEquations
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DiffusionModel_t* (DiffusionModel)
    - *UserDefinedData_t* ({UserDefined})

5.43 Gravity_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *DataArray_t* (GravityVector)
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *UserDefinedData_t* ({UserDefined})

5.44 GridConnectivity1to1_t

- Name
    - {UserDefined}
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *Transform_t"* (Transform)
    - *IndexRange_t* (PointRange)
    - *IndexRange_t* (PointRangeDonor)
    - *Ordinal_t* (Ordinal)
    - *GridConnectivityProperty_t* (GridConnectivityProperty)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.45 GridConnectivityProperty_t

- Name
    - GridConnectivityProperty
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes

- *Descriptor_t* ({UserDefined})

- *UserDefinedData_t* ({UserDefined})

- *Periodic_t* (Periodic)

- *AverageInterface_t* (AverageInterface)

5.46 GridConnectivityType_t

- Name
  - GridConnectivityType
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.47 GridConnectivity_t

- Name
  - {UserDefined}
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
  - *GridLocation_t* (GridLocation)
  - *Ordinal_t* (Ordinal)
  - *Descriptor_t* ({UserDefined})
  - *IndexRange_t* (PointRange)
  - *IndexArray_t* (PointList)
  - *IndexArray_t* (PointListDonor)
  - *IndexArray_t* (CellListDonor)
  - *GridConnectivityProperty_t* (GridConnectivityProperty)
  - *GridConnectivityType_t* (GridConnectivityType)
  - *DataArray_t* (InterpolantsDonor)

5.48 GridCoordinates_t

- Name
    - GridCoordinates
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *DataArray_t* ({UserDefined})
    - *Rind_t* (Rind)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.49 GridLocation_t

- Name
    - GridLocation
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.50 IndexArray_t

- Name
    - PointList
    - PointListDonor
    - CellListDonor
    - InwardNormalList
- Data-Type: I4 R4 R8
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.51 IndexRange_t

- Name
  - PointRange
  - PointRangeDonor
  - ElementRange
  - {UserDefined}
- Data-Type: I4
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.52 IntegralData_t

- Name
  - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
  - *Descriptor_t* ({UserDefined})
  - *DataClass_t* (DataClass)
  - *DimensionalUnits_t* (DimensionalUnits)
  - *DataArray_t* ({UserDefined})
  - *UserDefinedData_t* ({UserDefined})

5.53 InwardNormalIndex_t

- Name
  - InwardNormalIndex
- Data-Type: I4
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.54 Ordinal_t

- Name
    - Ordinal
- Data-Type: I4
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.55 OversetHoles_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *IndexArray_t* (PointList)
    - *GridLocation_t* (GridLocation)
    - *IndexRange_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.56 Periodic_t

- Name
    - Periodic
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})
    - *DataArray_t* (RotationCenter)
    - *DataArray_t* (RotationAngle)
    - *DataArray_t* (Translation)

5.57 ReferenceState_t

- Name
    - ReferenceState
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *Descriptor_t* (ReferenceStateDescription)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.58 RigidGridMotion_t

- Name
    - {UserDefined}
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})
    - *DataArray_t* ({UserDefined})

5.59 Rind_t

- Name
    - Rind
- Data-Type: I4
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.60 RotatingCoordinates_t

- Name
    - RotatingCoordinates
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *DataArray_t* (RotationCenter)
    - *DataArray_t* (RotationRateVector)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.61 SimulationType_t

- Name
    - SimulationType
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.62 ThermalConductivityModel_t

- Name
    - ThermalConductivityModel
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.63 ThermalRelaxationModel_t

- Name
    - ThermalRelaxationModel
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.64 Transform_t"

- Name
    - Transform
- Data-Type: I4
- Dimensions/DimensionValues
- Cardinality: Zero/One

5.65 TurbulenceClosure_t

- Name
    - TurbulenceClosure
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.66 TurbulenceModel_t

- Name
    - {UserDefined}
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DiffusionModel_t* (DiffusionModel)

5.67 UserDefinedData_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/N
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *GridLocation_t* (GridLocation)
    - *IndexRange_t* (PointRange)
    - *IndexArray_t* (PointList)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *FamilyName_t* (FamilyName)
    - *UserDefinedData_t* ({UserDefined})
    - *Ordinal_t* (Ordinal)

5.68 ViscosityModel_t

- Name
    - ViscosityModel
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *DataArray_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.69 WallFunctionType_t

- Name
    - WallFunctionType
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.70 WallFunction_t

- Name
    - WallFunction
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})
    - *WallFunctionType_t* (WallFunctionType)

5.71 ZoneBC_t

- Name
    - ZoneBC
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *BC_t* ({UserDefined})
    - *ReferenceState_t* (ReferenceState)
    - *DataClass_t* (DataClass)
    - *DimensionalUnits_t* (DimensionalUnits)
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.72 ZoneGridConnectivity_t

- Name
    - ZoneGridConnectivity
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *GridConnectivity1to1_t* ({UserDefined})
    - *GridConnectivity_t* ({UserDefined})
    - *OversetHoles_t* ({UserDefined})
    - *Descriptor_t* ({UserDefined})
    - *UserDefinedData_t* ({UserDefined})

5.73 ZoneIterativeData_t

- Name
    - {UserDefined}
- Data-Type: M T
- Dimensions/DimensionValues
- Cardinality: Zero/One
- Child Nodes
    - *DataClass_t* (DataClass)

– *DimensionalUnits_t* (DimensionalUnits)

– *Descriptor_t* ({UserDefined})

– *UserDefinedData_t* ({UserDefined})

– *DataArray_t* ({UserDefined})

5.74 ZoneType_t

- Name
    - ZoneType
- Data-Type: C1
- Dimensions/DimensionValues
- Cardinality: One/One

5.75 Zone_t

- Name
    - {UserDefined}
- Data-Type: I4
